# Connection Node

These connection nodes serve as connecting pieces for a steel-glass roof construction. MSH profile which are custom-sawed are attached to these. They support the glass elements and enable three-dimensional architecture. The construction design has already been implemented at several locations in Europe and guarantees spectacular views.

In total, more than 1,500 of these nodes from plate in 2-axis, 3-axis or three-dimensionally have been

burned. Scarcely any one burning part is similar to another. In a further stage, the material was shot-blasted and accepted in our own testing laboratory.

In case of an individual unit production time per connection node of approximately 16 minutes, the projects could be delivered complete after only four months in each case. Thus the high expectations of our customer could be met as a result of trouble-free joint cooperation with our experienced employees.

Specification	connection node flame cutted in 2 resp. 3 axes shot-blasted acc. to DIN II A 55928-SA 2,5 MTC DIN EN 10204/3.1B
End Use	connection for steel and glass roof construction
Steel Grade	S355J2G3 and S460N
Dimension	approx. 180 x 197 x 327 mm
Weight	27 up to 89 kg (raw)
